Transmitter TGx 5-Ex must be powered from an intrinsically safer certified current source, suitable for connection to the transmitter's power supply circuit.

In the case of a 2-wire connection, the output signal is shown as a change of the current consumption.

Power supply circuit

With type of protection „intrinsic safety“

EEx ib IIC

Rated values

Voltage 1 2...20 V DC

Current

With 2-wire connection up to 20 mA

For connection to an intrinsically safe certified circuit with the following max. values:

Open-circuit voltage 20 V

Short-circuit current to 35 mA

Power to 0.7 W

Effective internal inductance between the terminals and housing (earth) ≤ 6 nF.

Effective internal inductance is negligible.

Output circuit

With type of protection „Intrinsic safety“

EEx ib IIC

The power supply circuit and output circuit are identical for the 2-wire connection. In the event of a fault, the maximum values of the power supply circuit will also occur in the output circuit.

If active, intrinsically safe circuits are connected to the output circuit, the sum total of the maximum values of the active, intrinsically safe circuits, connected to the output circuit, including the maximum values of the power supply circuit may not exceed the following values:

Voltage to 20 V

Current to 35 mA

Power to 0.7 W
