

3500 Software

Bently Nevada* Asset Condition Monitoring

Description

Rack Configuration Software is used to configure all modules of the 3500 Machinery Protection System. All 3500 software is Windows® based and can operate across a network.

Note: The primary role of the 3500 Data Acquisition and Operator Display software is as an emulation package to display the data normally found on the front-panel display of a machinery protection system. The software also provides basic trending and event archiving functions. It does not provide the dynamic data capture and plot capabilities required for machinery diagnostics or for connection to a Bently Nevada Decision Support* system.

Specifications

Minimum Computer Requirements:

Rack Configuration Computer:

- Intel® Pentium® processor or better
- 800x600 (SVGA) or higher resolution Monitor
- CD-ROM drive
- 128 Megabytes of RAM recommended
